

PERSONAL REFLECTION

TSHEPO M MASIMONG : 223081118

Project Name: Setshabelo Integrated Website & Mobile Application

Contribution Areas: MS Project File, Sequence Diagrams, Stakeholder Meeting

8 - 25 September - MS Project File

From the previous Phase I just updated the Microsoft Project from the day Phase 2 started on the 8th of September to the last day of submission 25th September. I recorded every milestone we did in this phase on the application.

9 September – Sequence Diagrams

I started designing the the sequence diagrams both parent and admin sequence. They were very difficult to get right because they had to align with the use case and ERD. Had to redo and improve them multiple times

16 September - Stakeholder Meeting

On the 16th we held a consultation and feedback meeting with our stakeholder at Setshabelo Primary School to update them on our progress and showcase how the User Interface is going to look like and also to get feedback on what we presented. The stakeholder was very pleased with the progress and the meeting went very well.

FINAL THOUGHTS - Phase 2

I think I did all my tasks to the best of my ability. This phase has taught me that getting sign off from the stakeholder on system design is very important before one can proceed on any coding writing.
