

PERSONAL PROGRESS AND CONTRIBUTION RECORD

Project: Setshabelo Integrated Website & Mobile Application

Contribution Areas: Stakeholder Interview, Economic Feasibility, Schedule Feasibility and Feasibility Summary

Team Member: ANDRIES MATONA

Stud Number : 221021198

Date: 27 August 2026

1. Stakeholder Interview Preparation 23/08/2026

I prepared interview questions for the stakeholder meeting based on the problems identified with the current school registration process. The questions focused on understanding the difficulties caused by paper-based applications, long queues, incorrectly completed forms and communication through social media.

27/08/2026

2. Economic Feasibility

I investigated whether the project could be developed using the resources available to the team. The investigation found that development computers, test devices, internet access and required software are available. Flutter, Visual Studio and Supabase can be used with available/free resources, making the project economically feasible.

3. Schedule Feasibility

I reviewed whether the project could be completed within the available semester timeframe. The core functions are achievable, but the development schedule is tight because the team still needs to learn Supabase integration and allow enough time for testing. The bulk SMS feature was identified for removal to reduce the workload.

4. Final Feasibility Summary

Based on the investigation, I contributed to the conclusion that the project is feasible with changes. The project has sufficient resources and addresses the stakeholder's main problems. To remain achievable, the team should prioritise the core functions, begin Supabase integration early, remove bulk SMS and conduct testing throughout development.

5. Personal Reflection

This work helped me understand how stakeholder information can be used to evaluate whether a project is realistic. I also learned the importance of considering available resources and project time before finalising the system scope.

SETshabelo Primary School

Stakeholder Interview Questions – ITC327W Assessment 1

Project options: Attendance Register, Stationery, Uniform, and Online Registration**Purpose:** These questions are for our stakeholder interview. The aim is to understand the current process, problems, needs and what the school would expect from a possible system.**1. ATTENDANCE REGISTER**

1. How is learner attendance currently recorded at the school?
2. Who is responsible for taking attendance every day?
3. Is attendance recorded on paper, electronically, or both?
4. How often is attendance recorded during the school day?
5. Where are the attendance records kept after they are completed?
6. How does the school check if a learner has been absent for several days?
7. What problems do teachers experience when recording attendance?
8. Do teachers ever make mistakes when recording attendance? If yes, how are they corrected?
9. Does it take a lot of time to complete and manage the attendance register?
10. How does the school currently communicate a learner's absence to their parent or guardian?
11. What are the biggest problems with the current attendance process?
12. Would the school like teachers to record attendance using a phone, tablet or computer?
13. Should teachers be able to mark a learner as present, absent or late?
14. Should teachers be able to add a reason for an absence?
15. Should parents receive a notification when their child is marked absent?
16. Should parents be able to view their child's attendance history?
17. Should the system automatically calculate a learner's attendance percentage?
18. Who should be allowed to edit or correct an attendance record?
19. What attendance reports would the school need?
20. What would make an electronic attendance system useful and successful for the school?

2. STATIONERY

1. How is stationery currently managed at the school?
2. Who is responsible for ordering and managing stationery?
3. Where is stationery stored?
4. How does the school record stationery that has been received?
5. How is stationery recorded when it is given to teachers or learners?
6. Does the school currently use a paper register, Excel, or another system for stationery?
7. How often does the school check its stationery stock?
8. What are the biggest problems with the current stationery process?
9. Does the school sometimes run out of important stationery?
10. Does stationery ever get lost or go missing?
11. Is it difficult to know how much stationery is available at a particular time?
12. Is it difficult to know who received a particular stationery item?
13. How does the school know when stationery needs to be ordered again?
14. Would teachers need to request stationery through the system?
15. Should an administrator approve stationery requests?
16. Should the system automatically calculate the remaining stock?
17. Should the system notify the responsible person when stock is low?

4. ONLINE REGISTRATION

1. How do parents currently register or apply for admission at the school?
2. When does registration for the next school year normally take place?
3. Who is responsible for receiving and processing applications?
4. Is the current registration process paper-based, online, or both?
5. What information does a parent currently have to provide about the learner?
6. What information does the parent or guardian have to provide?
7. What documents do parents need to submit with an application?
8. How are applications stored after they are submitted?
9. Who checks and processes the applications?
10. How does the school decide whether an application is approved or rejected?
11. How are parents currently informed about the outcome of an application?
12. What are the biggest problems with the current registration process?
13. Do parents have to come to the school in person to submit applications?
14. Do parents experience long queues during registration periods?
15. Does the school experience problems with incomplete or incorrect application forms?
16. Would the school like parents to complete and submit applications online?
17. What documents should parents be able to upload?
18. Should parents be able to check their application status online?
19. Should the school be able to review, approve, reject and request additional information through the system?
20. Should parents receive notifications when their application status changes?
21. Who should be allowed to access learner application information?
22. What information should parents be allowed to change after submitting an application?
23. Should the system prevent a parent from submitting duplicate applications?
24. What reports would the school need from an online registration system?
25. Would the school prefer the system to work on mobile phones, computers, or both?
26. What would make an online registration system successful from the school's point of view?

27/08/2026 Discussion of Feasibility

	Availability	Response / Answer
* Transport → Disturbance	Yes	Each member responsible for their transport
* Access to data / Internet	Yes	Each member responsible for their own connectivity
* Presentation Resources	Yes	Power-point / Google Slides available
* Test devices	Yes	Personal / smart phones & computers are available
* Development of Computers	Yes	University labs and personal / computers are available
* Database Resources	Yes	Free trial provides enough resources for prototype
* Required Software	Yes	Free version of Flutter / Visual Studio 2022 and database are available
* Other Resources for Project	Yes	GitHub - free library is available

Schedule Feasibility

* Is enough time available for system design?

→ Yes - design activities can be completed within period or planned timeframe.

* Is enough time available for system design?

→ Yes, core system functions possible within quarter.

* Is enough time available for ASP.NET design?

→ Yes, Admin dashboard functions are achievable.

* Enough time for Database Migration?

→ Tight - Most group members must learn about migration first.

* Enough time for Stakeholder feedback?

→ Yes, regular feedback sessions can be scheduled.
